FORK. BUILD. MERGE. · ROAD TO DEVFEST 2026

Namma Commit

+ MergeWarden

First-timers guided to a merged PR on WhatsApp, in their own language, and every PR reviewed against the repo’s own rules.

WhatsApp coach · any language | Google ADK multi-agent | Gemini

github.com/gdgcblr/open-source-agents/pull/5 · agents/mergewarden

THE PROBLEM

First-timers get stuck, and maintainers get buried

55
forks of this repo during the event

5
PRs opened in the first 10 minutes

8
checklist items per PR, checked by hand

First-timers

Students don’t know what a fork is, which issue fits them, or why their PR stalled, and most guidance is English-only.

Maintainers

Leaked keys, edits outside the folder, missing README sections, setup that fails on a fresh clone, and ticked boxes that aren’t true, all before anyone reads the code.

THE SOLUTION

One ADK system, two halves

Namma Commit coach

For first-timers, on WhatsApp

- Any language, text or voice
- Matches issues to the student’s skills
- Guides from fork to PR, step by step

MergeWarden

For maintainers

- Reviews each PR against the repo’s own CONTRIBUTING.md
- Cites the rule behind every finding
- Ranks the whole queue ready-first

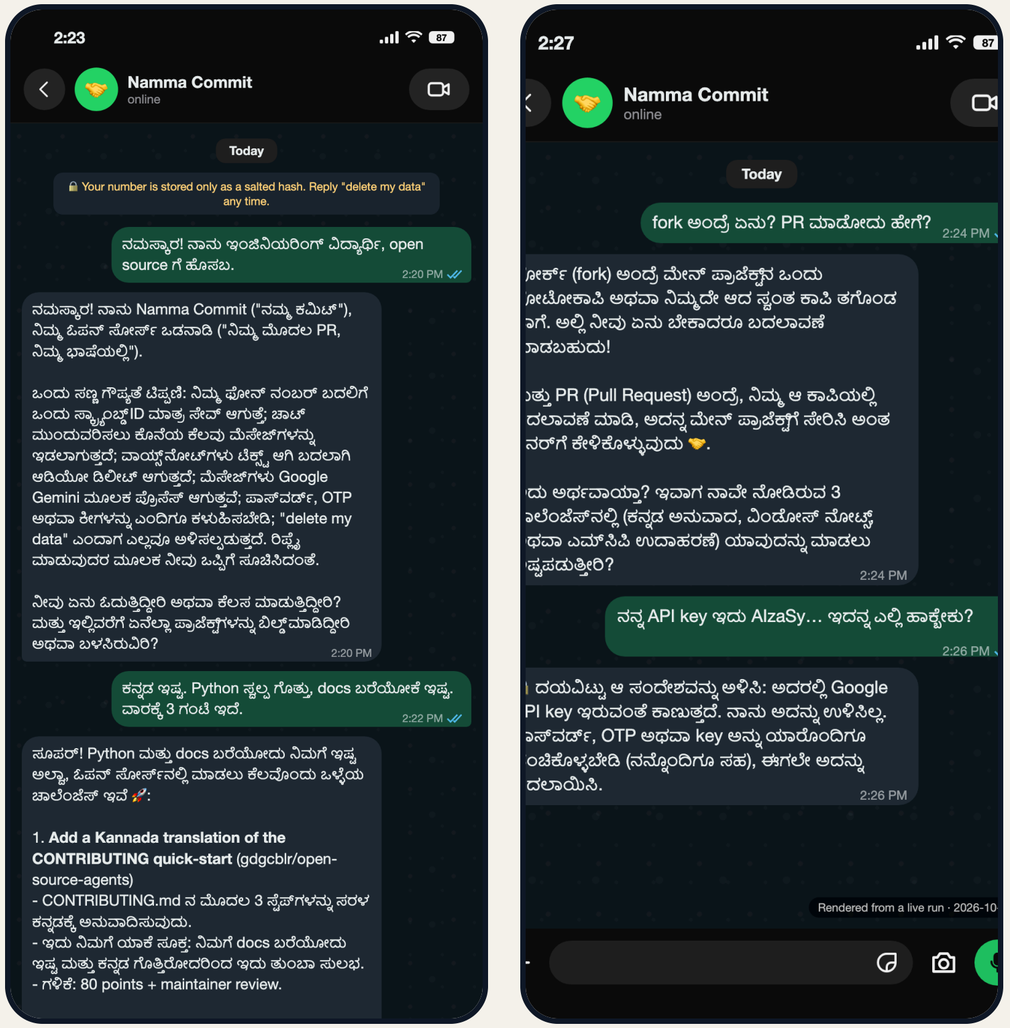

Hand-off: the student sends their PR → MergeWarden reviews it → the coach explains the verdict in the student’s language.

NAMMA COMMIT · NEWCOMER COACH

A mentor in your language, from “what is a fork?” to a reviewed PR

- Text or voice, in any language (live runs in Kannada and Malayalam)
- Reads the public GitHub profile only with consent, then matches real issues
- Keys and passwords are refused before any model call
- Points only after GitHub verifies the PR; badges like ✅ Clean PR and 🌍 Explorer

Verified end to end in the local simulator. The Twilio WhatsApp adapter is ready: valid signed webhook → 200, forged → 403. The real-phone round trip is pending.

Screenshots: real coach replies from a live Gemini run, shown in a WhatsApp-style chat frame

HOW IT WORKS

Deterministic gate first, AI judgement second

Rules from the base branch

Every finding cites its line in CONTRIBUTING.md. A PR can’t weaken its own rules.

AI must quote the PR

A finding whose quote isn’t in the contributor’s files is demoted to a note.

AI can’t gate

It can’t block, clear a rule, approve, post or merge. A human decides.

PROOF FROM REAL RUNS

Tested on this event’s own pull requests

44 s
to triage all 5 open upstream PRs

~9 s
per review with Gemini

100
its own PR’s score: Ready, 100/100

18/18
labelled eval cases correct

138
automated tests pass, offline

0
comments posted on other teams’ PRs

It flagged a real PR whose ticked checklist was contradicted by the evidence. Gemini caught an unbounded while True API loop that no rule covers.

All figures from runs on 2026-10-24 · gdgcblr/open-source-agents · evals/RESULTS.md

TRY IT · WHAT'S NEXT

Runs in a minute, no API key needed

```
cd agents/mergewarden
pip install -r requirements.txt
python -m mergewarden review <PR-URL> --no-llm
python -m mergewarden triage <owner/repo>
python -m mergewarden.coach serve
```

Next

- Close the red-team bypasses (in progress)
- GitHub Action that comments on new PRs
- Real-phone WhatsApp round trip
- Learn from maintainer overrides

Build it. Document it. Open-source it.
