AfterClick

Your local AI agent to curate event photos and find the people and moments that matter.

LOCAL AI

ORIGINALS PRESERVED

OPT-IN FACE SEARCH

The technology behind AfterClick

Local model inference. Python tools. A browser interface served from your laptop.

AI + AGENT

Ollama / Gemma 4 E2B

Custom Python tool loop: inspect, visual search, face count and shortlist. Bounded steps, retries and cache.

BACKEND

Python / FastAPI / SQLite

Python 3.11+, Uvicorn, python-multipart and python-dotenv. Typer CLI and Rich progress.

IMAGE PROCESSING

OpenCV / Pillow / ImageHash

NumPy, pillow-heif; sharpness, exposure, pHash grouping and optimized WebP previews.

OPT-IN FACE MATCHING

OpenCV YuNet / SFace

Local face detection and embeddings. Reference-based possible matches and dotted face boxes.

INTERFACE

React / Vite / Tailwind / beUI

JavaScript + TypeScript, Motion, lucide-react, clsx and tailwind-merge. Bundled local assets.

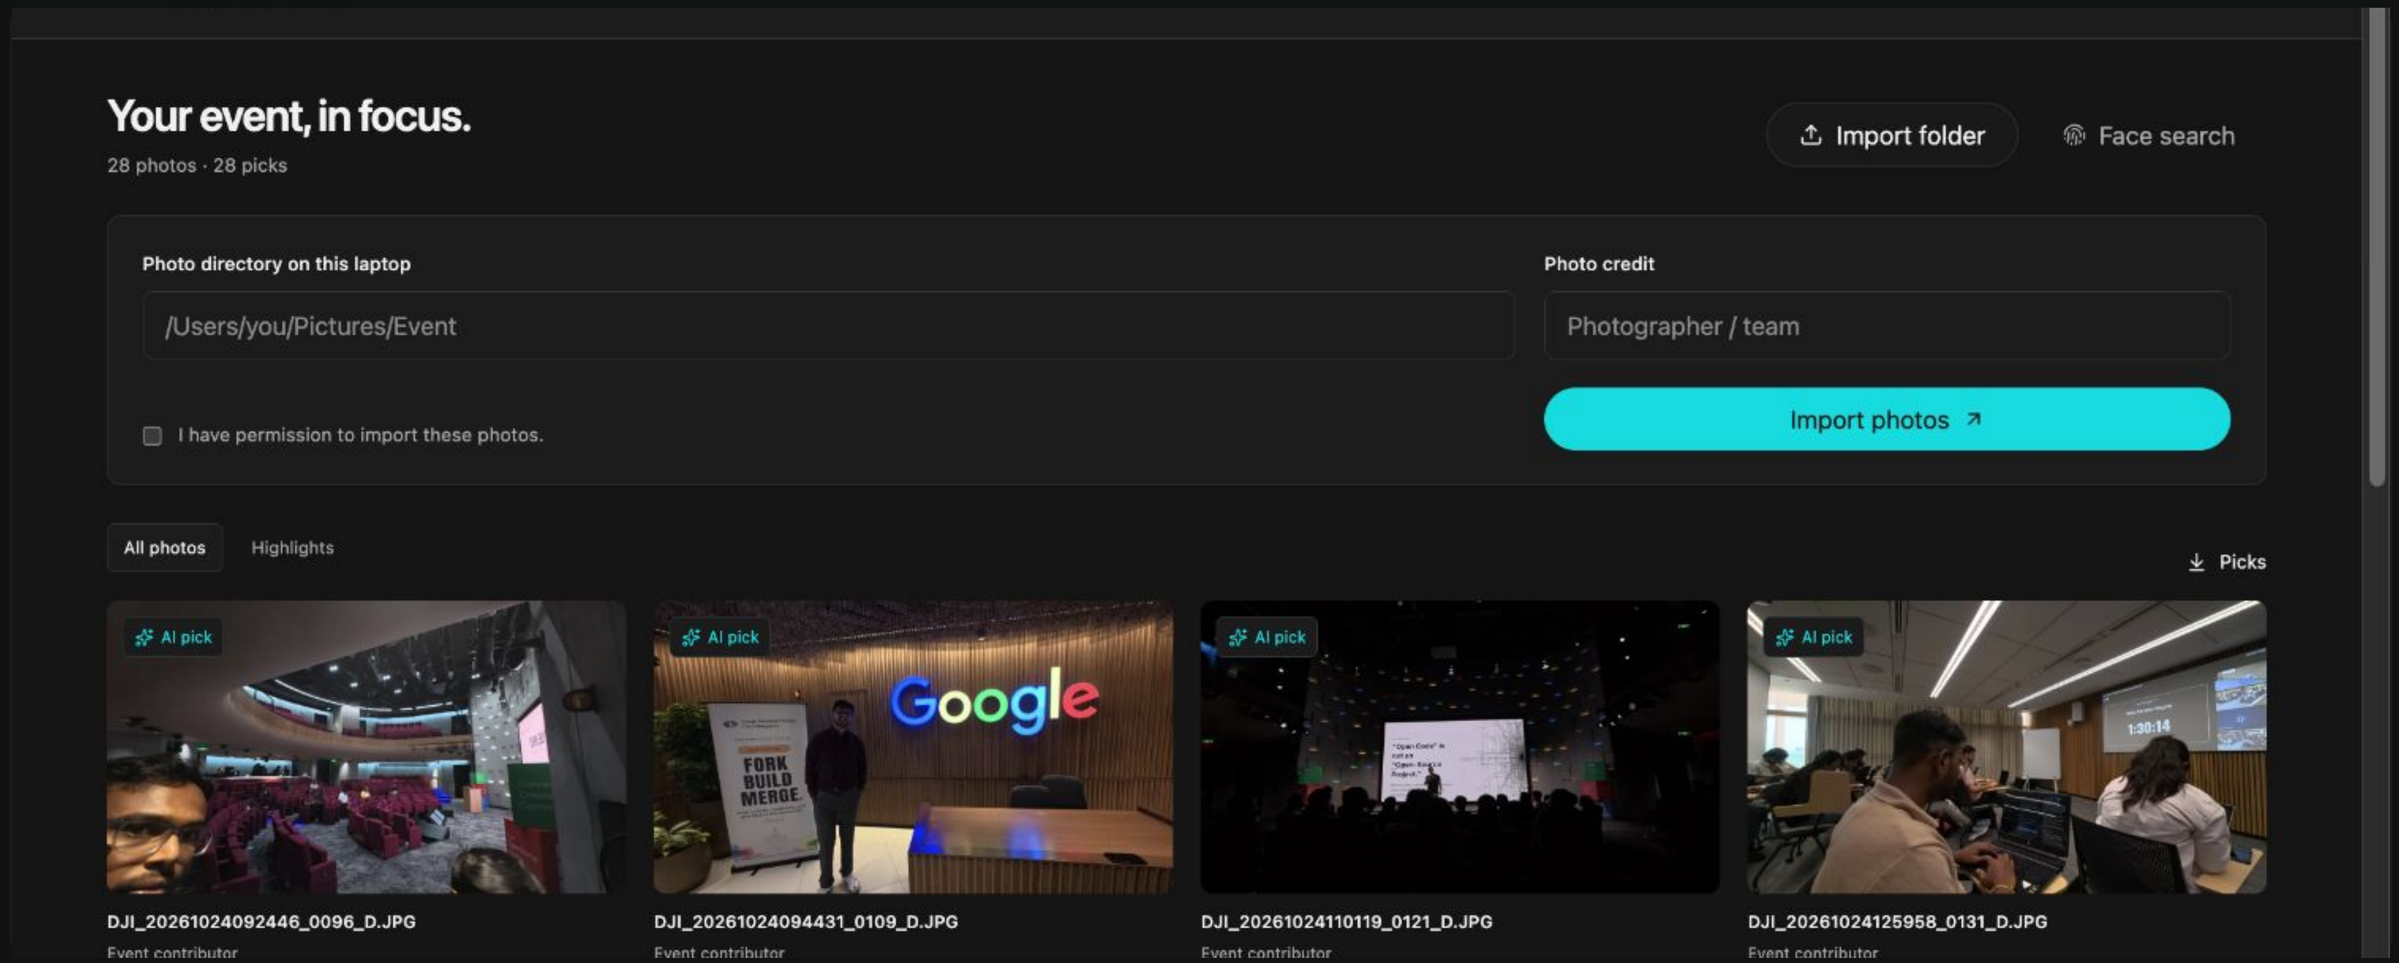

TESTS + OPTIONAL SUPPORT

pytest / httpx / Node tests

React server-rendering checks. Optional: google-genai / Gemini, rawpy for RAF, and a mock provider.

Bring in the event

Point AfterClick at your photo folder.

01 Choose the folder

Enter the photo directory on this laptop.

02 Add the credit

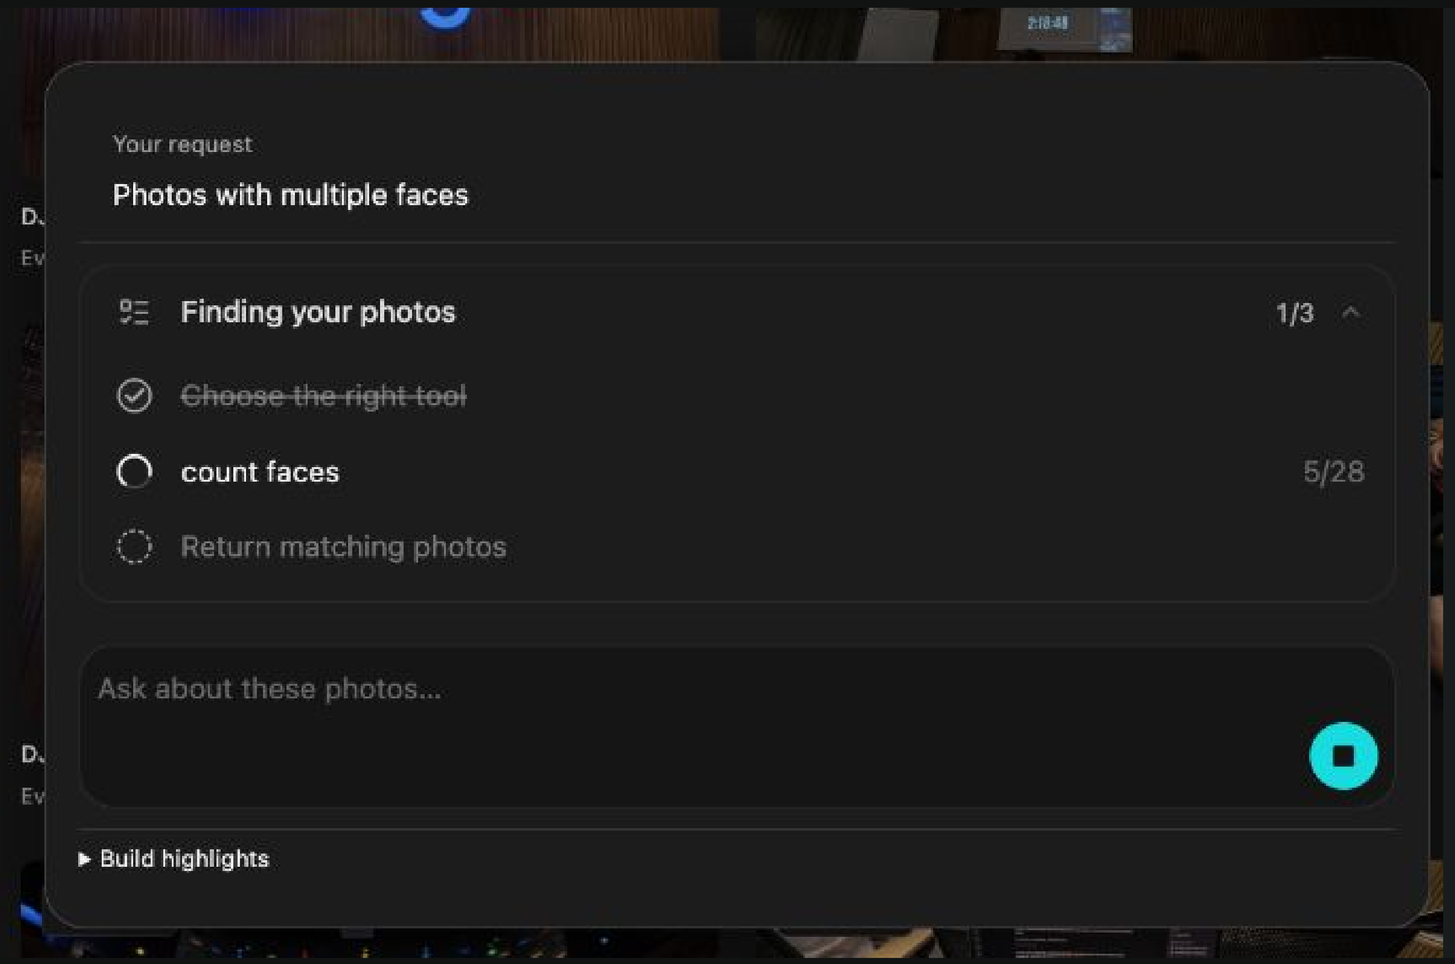

Set the photographer or team name.

03 Import with permission

Confirm permission and import photos.

Ask. Watch the agent work.

Request: "Photos with multiple faces"

Live capture: the request remains visible above the task list.

01 **Make a request**

Type a task or choose a suggestion.

02 **Follow the task list**

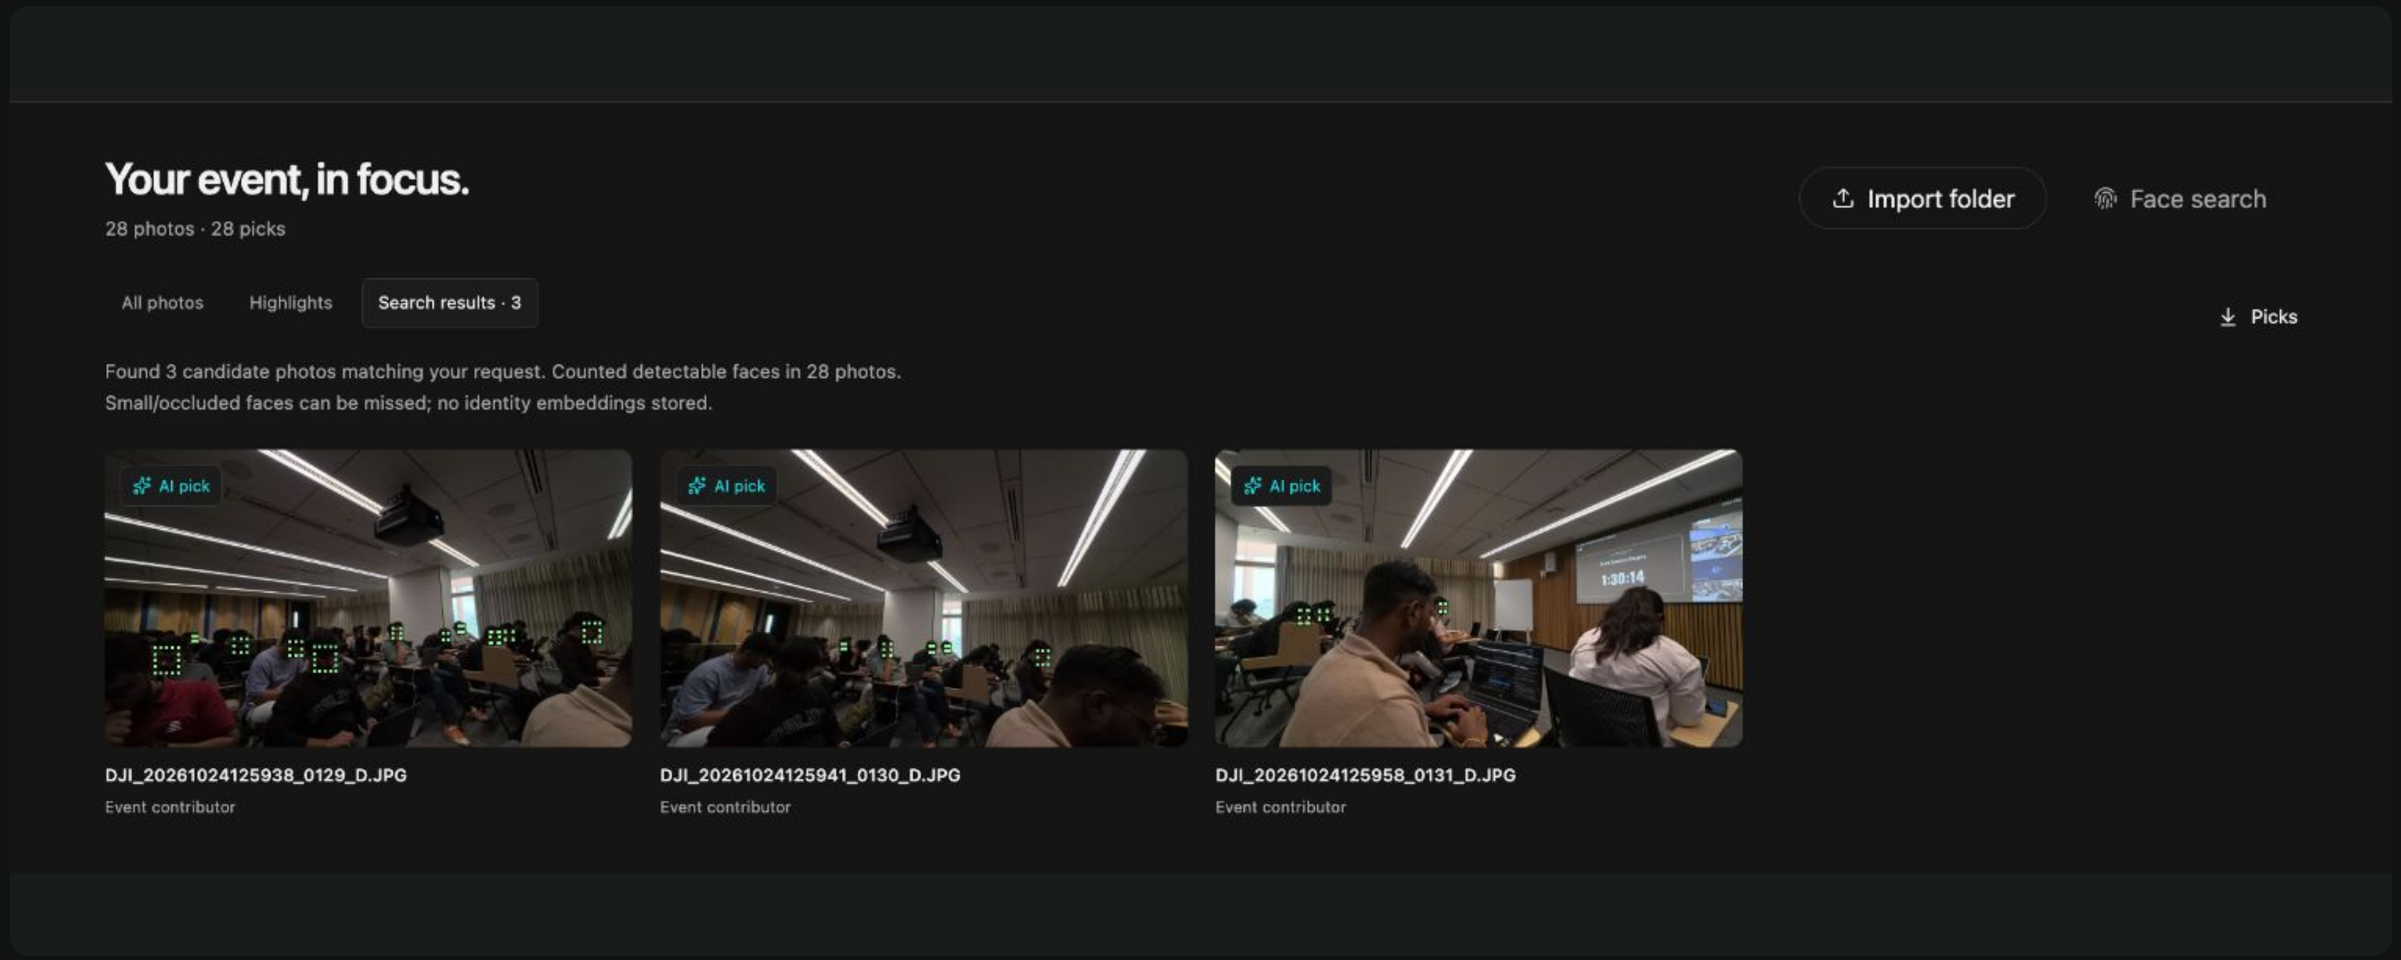

See tool selection and photo inspection.

03 **Get the answer**

Matching photos appear when complete.

Find photos with multiple faces

The completed search returned 3 candidates from 28 event photos.

This flow counts faces; it does not identify people.

01 **See the result set**

Only returned candidate photos are shown.

02 **Inspect face boxes**

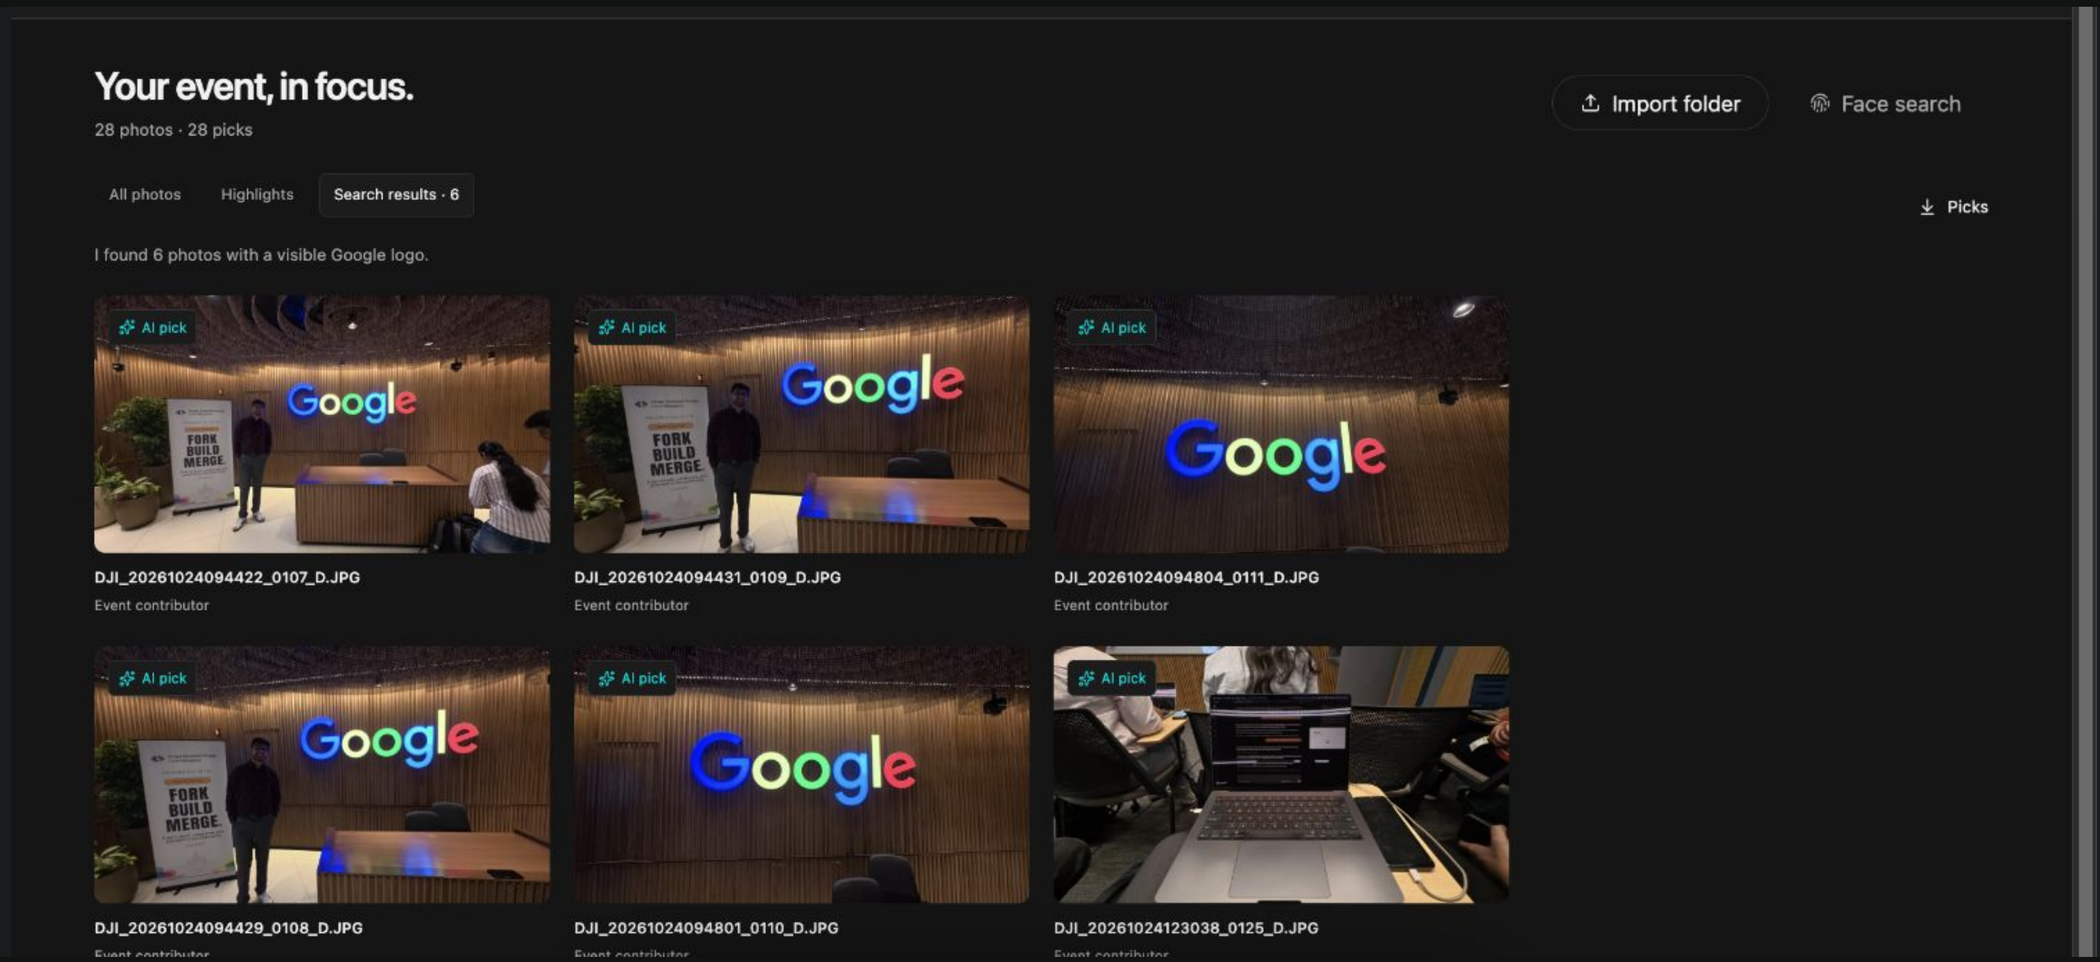

Dotted rectangles mark detected faces.

03 **Open a photo**

Review the preview or get the original.

Find photos with the Google logo

Request: "Photos with the Google logo"

Live local search result. AI candidates require review.

01 **Describe what you need**

Search the event in natural language.

02 **Review candidates**

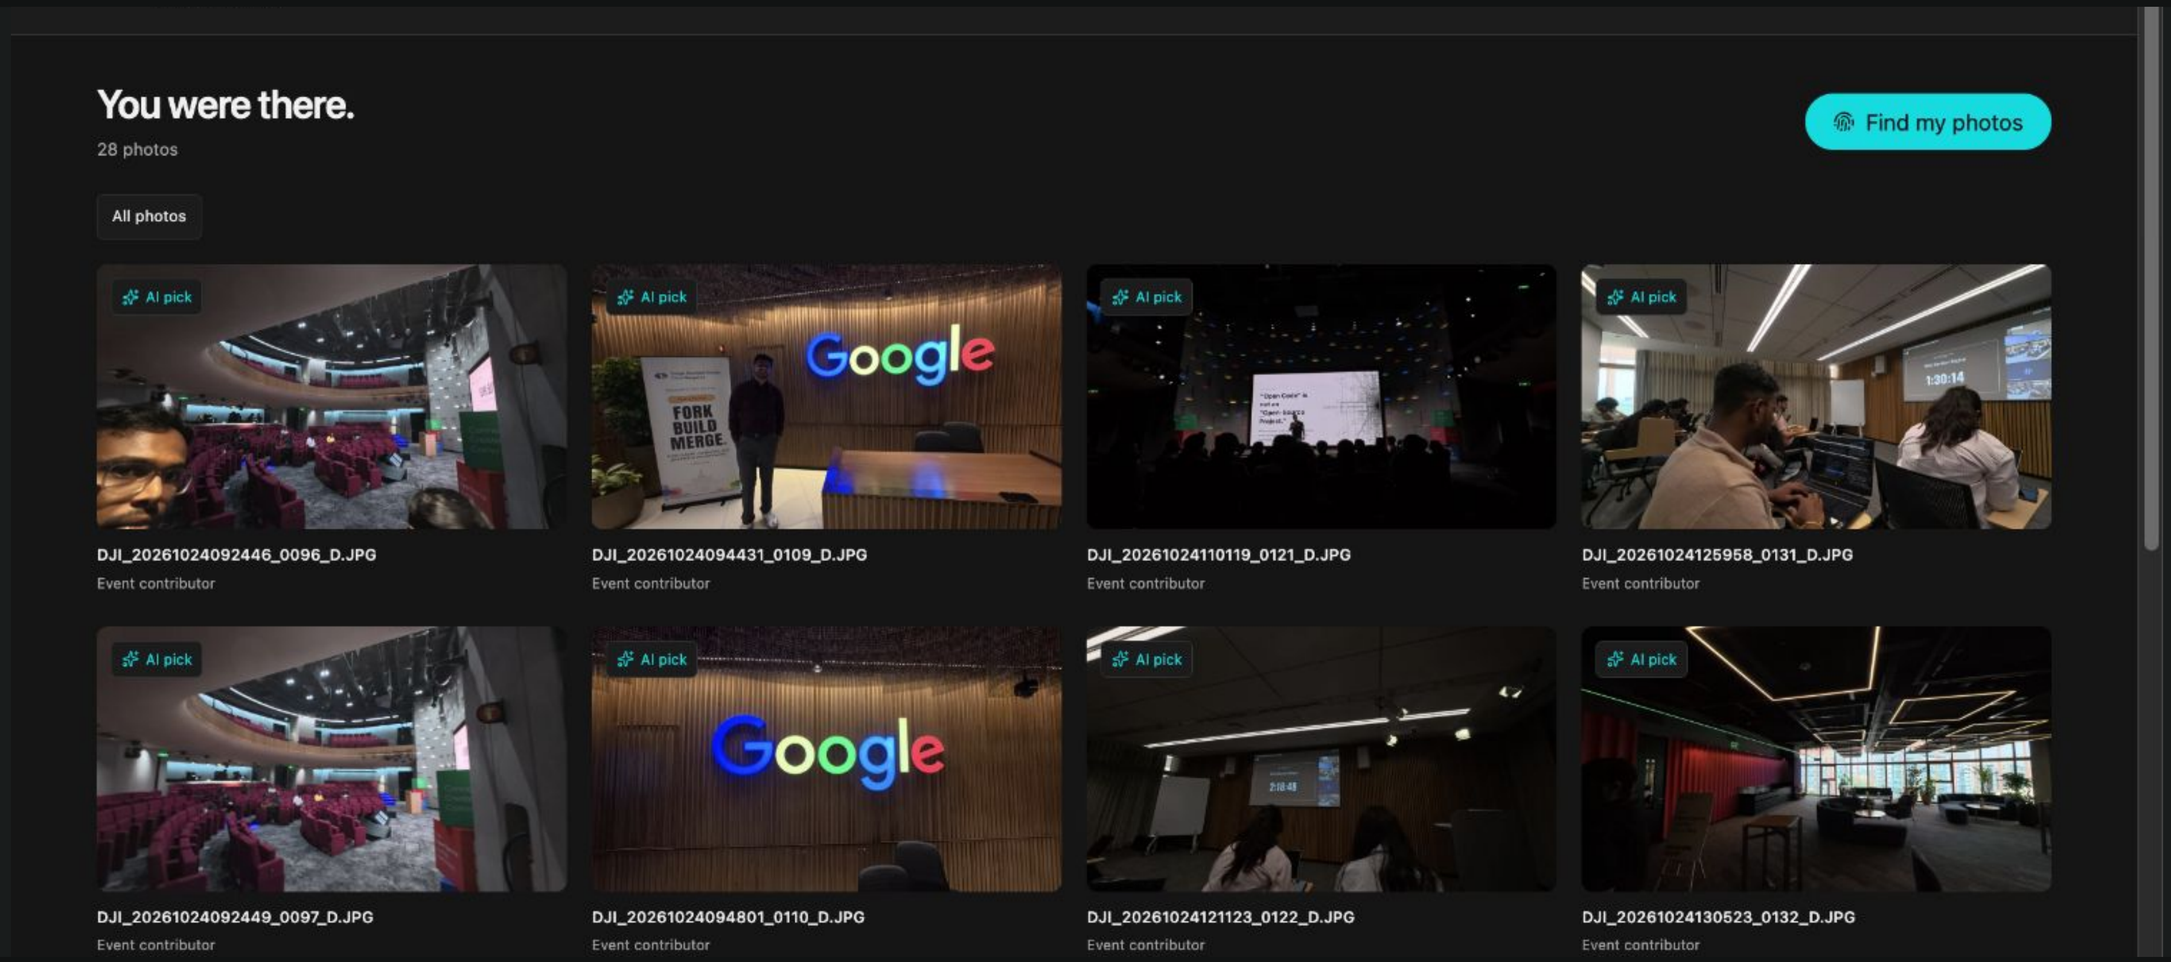

The agent returned 6 candidate photos.

03 **Choose the right shot**

Inspect uncertain detections before use.

Your event photos, without the clutter

Attendees browse the gallery and open Find my photos.

01 **Browse the gallery**

Load optimized previews of event photos.

02 **Open a photo**

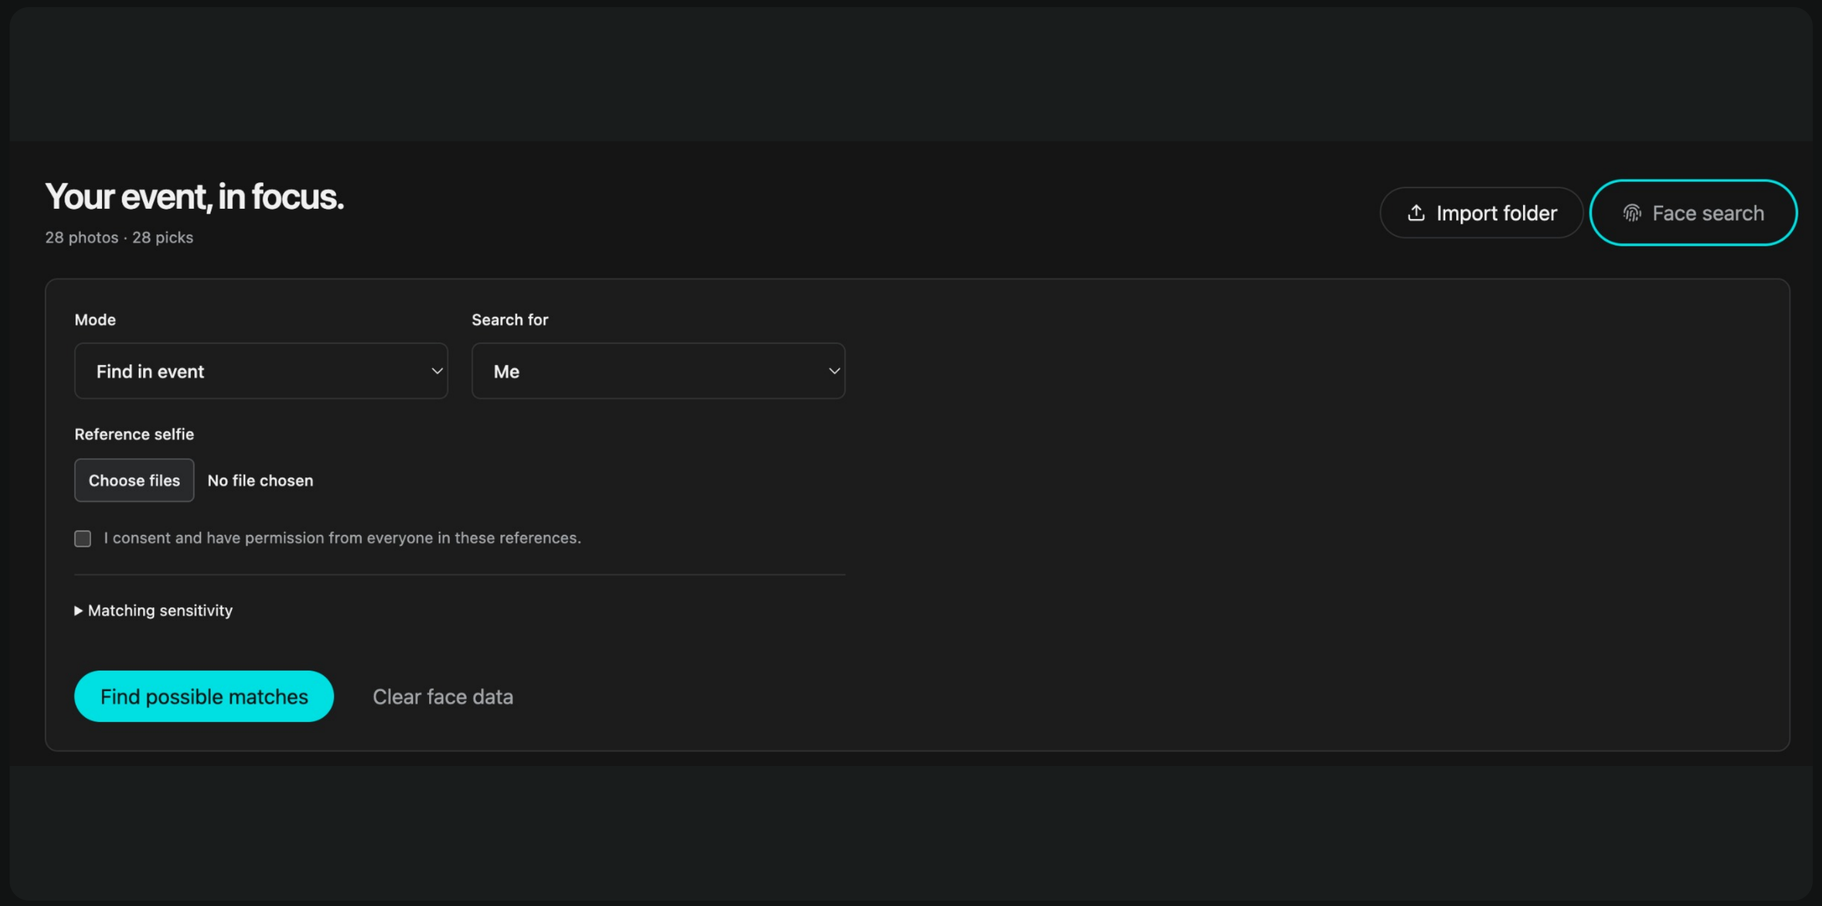

Inspect the larger preview.

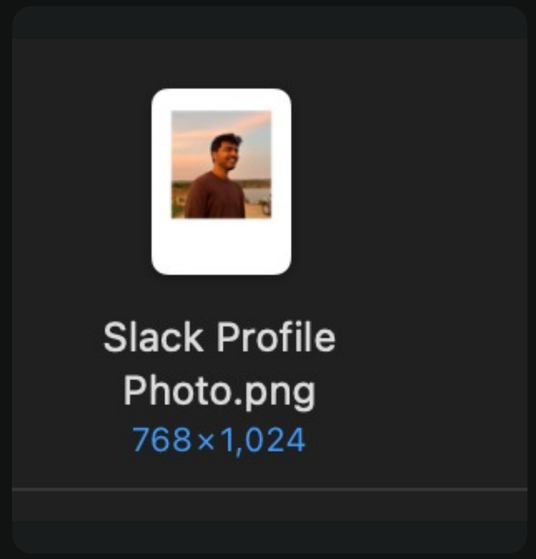

03 **Find your photos**

Start an opt-in reference-face search.

Find my photos: add a reference

Use a clear selfie, confirm consent, then search within this event.

Reference photo example

User-supplied screenshots; the same search controls are also available in organizer view.

01 Select a reference

Choose a photo with one clear face.

02 Confirm consent

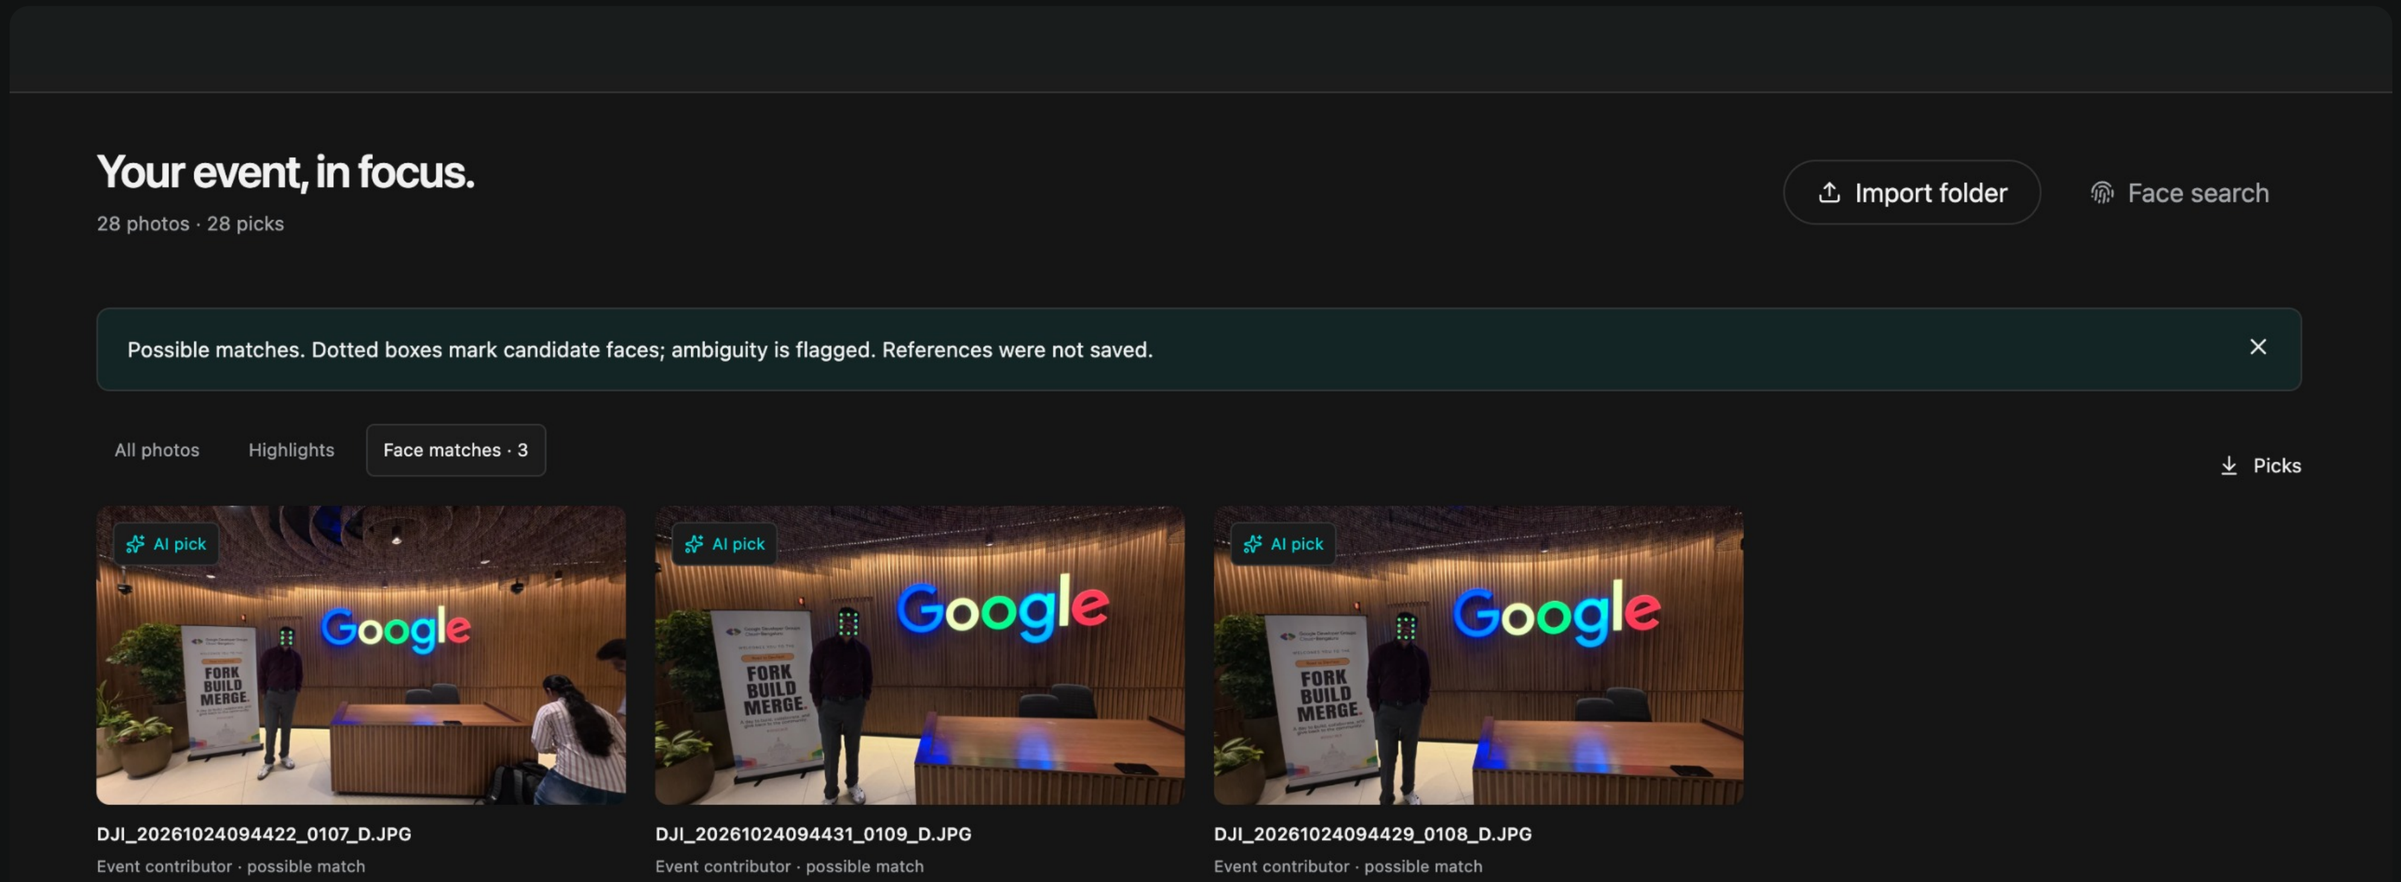

Have permission for the reference.

03 Find possible matches

Run matching inside the local event.

Review your possible matches

Your supplied screenshot shows 3 possible matching photos.

User-supplied result capture. Match correctness was not independently verified.

01 View the filtered set

The gallery shows Face matches - 3.

02 Locate candidate faces

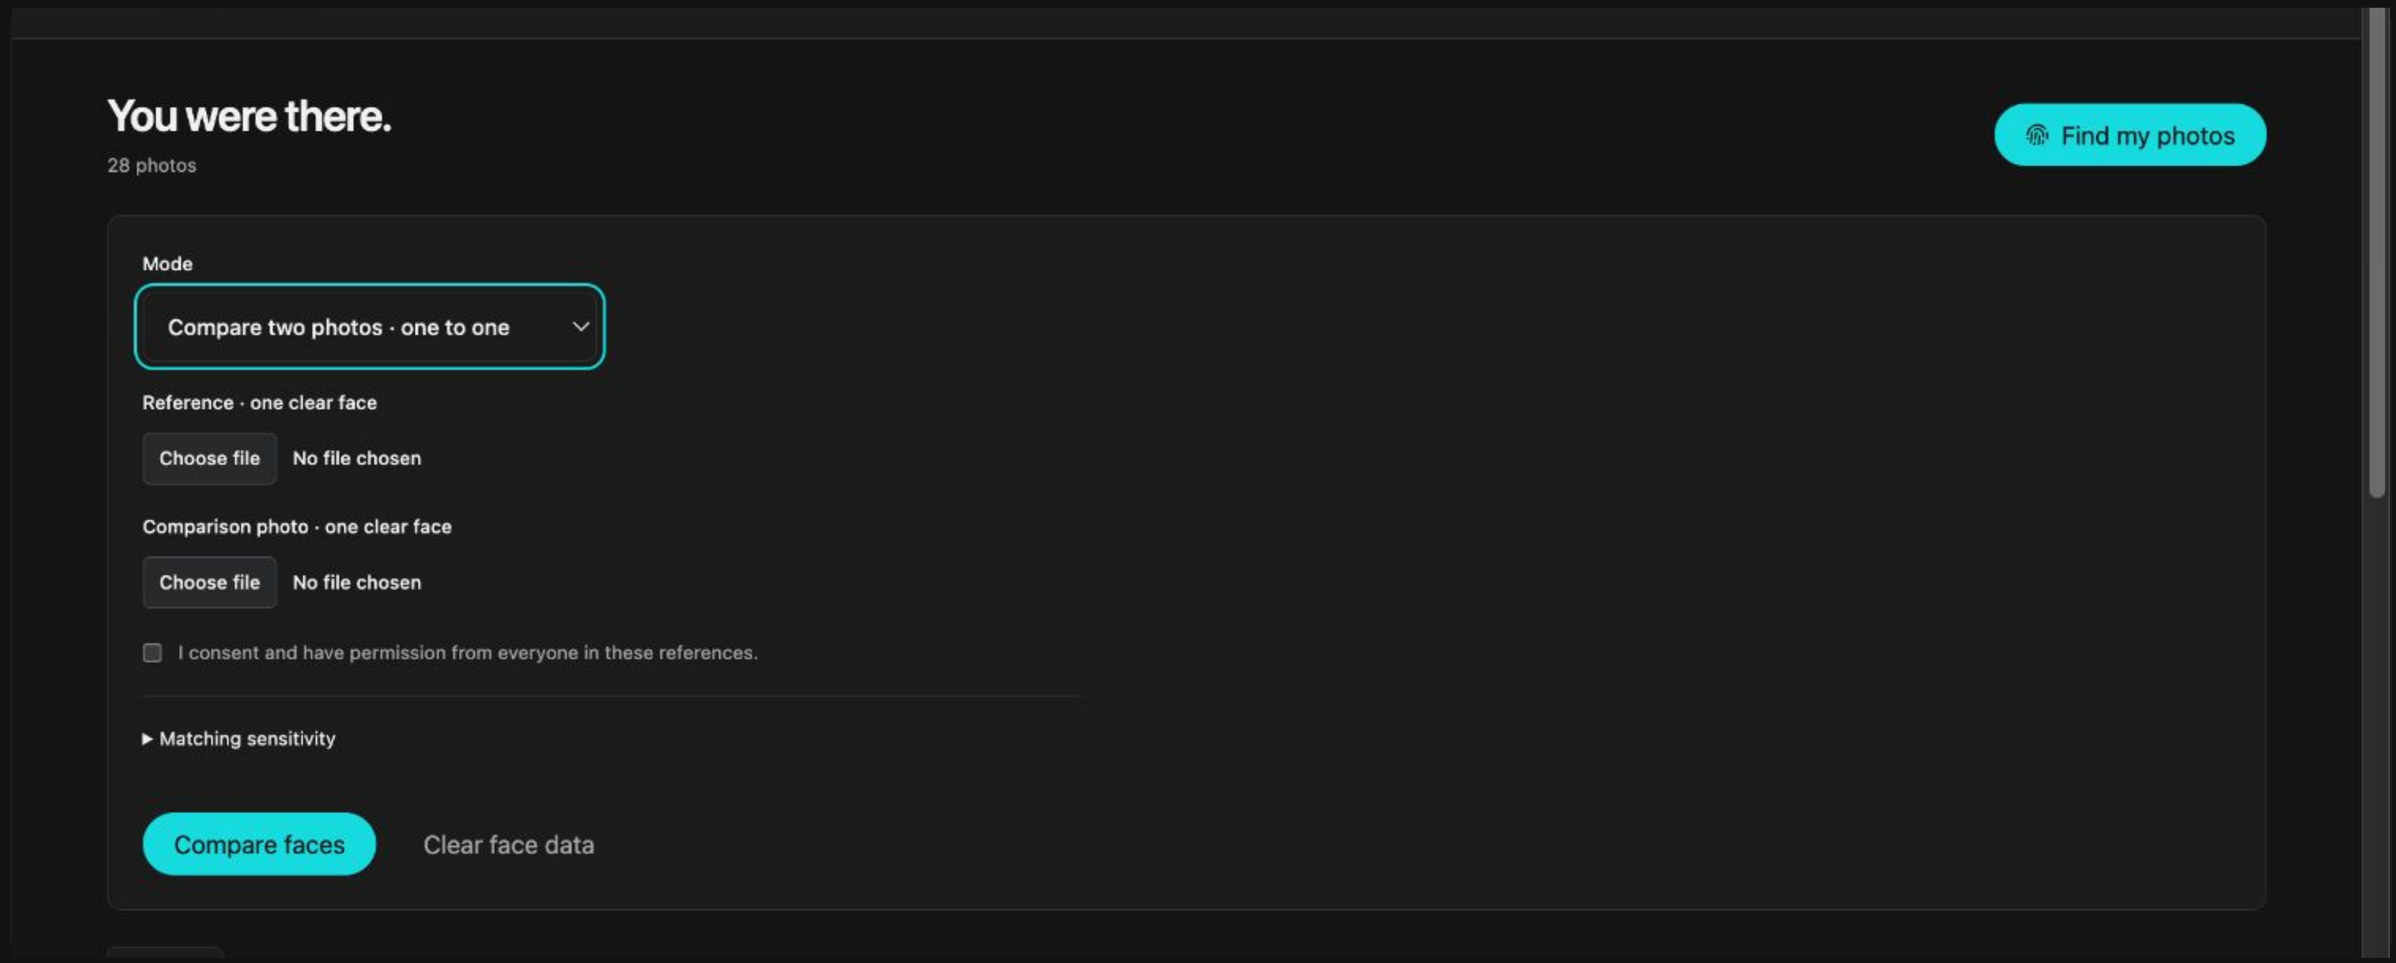

Dotted boxes show the possible matches.

03 Review and download

Check each candidate before sharing.

Compare two photos, one to one

A reference face and a comparison face.

Comparison form captured; no completed one-to-one result is included.

01 **Switch the mode**

Choose one-to-one comparison.

02 **Choose two photos**

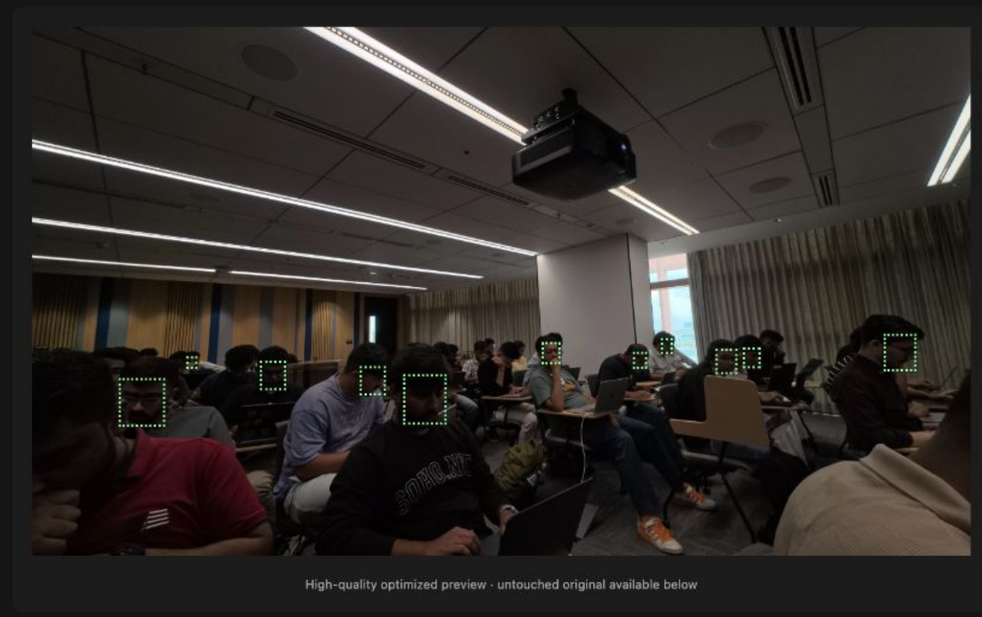

Use one clear face in each image.

03 **Consent and compare**

Review the possible-match outcome.

Keep the original. Export a copy.

Original-quality downloads with optional watermark and credit metadata.

Export controls shown. AI descriptions and captions in the UI may be inaccurate.

01 Download the original

Get the untouched original file.

02 Add a watermark

Choose optional text for a JPEG copy.

03 Preserve attribution

Include photographer metadata on export.
